

Celastrus scandens

American Bittersweet

Easily grown vine, whose primary landscape value is its beautiful orange-and-crimson berries, which ripen in October and persist through the winter. (Warning: the berries are poisonous.) Also provides good cover for wildlife. A good alternative to the highly invasive Oriental bittersweet (*Celastrus orbiculatus*). Tolerant of many sites.

Suggested companions: sassafras (*Sassafras albidum*), staghorn sumac (*Rhus typhina*).

Plant Type: Vine

Size: 3'-20' H
 W

Water Tolerant: No

Habitat:
Woodland Margin

Soil: Average Garden Soil
Sandy/ Gravelly
Rich Moist
Clay

Exposure: sun
 filtered
 shade

Flower Color:
Yellow
Green

Bloom Time:
May
June

Other Attributes:
Winter interest
Fall color
Wildlife attracting

Plant in:

Groundcover: No
